PROVIDENT ESTATE · MARKETING

Video Guideline.

PLATFORMS · PRODUCTION · CAMPAIGN OUTPUTS · JULY 2026

The standard for every Provident *video*

Brand foundations, platform delivery and campaign outputs: what every editor, videographer and marketer follows so that a Provident video looks like Provident, on any platform.

The four color laws

“Navy dominates. Orange punctuates. Warm neutrals carry the breathing room.” The legacy teal (#1C6E8C) from the old template sheet is retired; the Literata italic accent word now inherits its headline color.

1 — No orange on blue. Ever.

Navy surfaces, panels, scrims and dark footage all count as blue. On them the orange budget is zero and the logo switches to the all-white lockup.

2 — White headings on navy.

Key headings and important overlays on navy are set in white. Support copy steps down to Mist, data labels to Stone.

3 — Blue text on light.

Deep Navy is the default text color wherever the ground is Paper or white: headlines, body and figures alike.

4 — Orange at dot scale only.

At most 10% of any design by area, 1–2% of visual emphasis: the logo dot plus one dot-sized accent per frame. Never text, never fills, never CTAs.

Deep Navy #1A2942 · surface	Provident Navy #2F4960 · voice	Signature Orange #F3793C · the dot	Paper #FAF8F4 · background	Cream #F4F1EC	Mist #ECE7DF	Stone #D4CFC4	Muted #6B7280	Charcoal #1A1A1A

Logo & typography

THE TWO VIDEO LOCKUPS

- Standard size 193 × 40 px on 1080-wide frames; closing frames may scale the logo up to ~480 px, centered.
- Clear space: minimum 40 px (one logo height) on all sides. No type, QR or platform UI inside it.
- The wordmark is never redrawn, recolored, outlined or skewed. Only the two lockups above exist on video.

TYPE SYSTEM — GOOGLE SANS FLEX & LITERATA

DISPLAY · GSF MEDIUM 500	Waterfront living, considered
SUPPORT · GSF REGULAR 400	Palm Jumeirah · from AED 4.2M
DATA · GSF BOLD 700 · TABULAR	18.2% AED 2.4M 1,540
LABELS · GSF MEDIUM 500 · CAPS	VILLA PRICE GROWTH · Q3 2026
ACCENT · LITERATA ITALIC	one accent word per headline — never UI or data

- Google Sans Flex and Literata are the company fonts; every graphic, super and title on video is set in them.
- Display tracking -2% (-0.02em); never tighter than -4%.
- Literata is reserved for editorial warmth: exactly one italic word per headline, inheriting the headline's color.

Safe zones on vertical *platforms*

Working rule on a 1080 × 1920 master: keep 250 px top, 340 px bottom and 120 px right clear. Faces, headlines and the logo stay inside the middle 70% of frame.

ZONE	WHAT LIVES THERE
Top 250 px	Profile icon and platform chrome (Stories, Reels, TikTok)
DLD QR · top-right	Reserved 250 × 250 px slot directly below the top clear zone, inside the icon-stack line; nothing else enters it
Bottom 340 px	Captions, CTAs, comment box. Subtitles sit just above this line, above the repost icon
Right 120 px	Like / comment / share / repost icon stack
100 px margins	On 1:1, 4:5, 3:4 and 16:9 formats, the margin grid applies on every edge

Build these as locked guide layers in the Premiere / After Effects master projects so editors never eyeball it.

House rules for every platform

DURATION

The 45-second rule

All short-form content is capped at 40–45 seconds regardless of what the platform allows, because completion rate drives distribution on every algorithm. Exceptions: long-form YouTube and podcast (under 20 minutes).

CLOSING FRAME

Two lockups only

Allowed: fade in / fade out, and a smooth zoom toward the logo when needed. For creative aesthetics the closing logo may sit directly over the final shot, always as the all-white lockup over footage. No spins, no drastic transitions.

SUBTITLES

Company font first

Google Sans Flex Medium is the default for burned-in subtitles: white, center-frame, above the repost icon. For creative edits, stylized and third-party fonts are allowed; keep them legible and inside the safe zones. YouTube long-form / podcast: separate SRT per language (EN/AR/RU), never burned in. YouTube Shorts still get burned-in subs.

THUMBNAILS

Stills for the graphics team

Thumbnails are created by the graphics team, not the video team. From every video, deliver 1–3 clean frame options at full resolution: the agent or the unit, well lit and sharp. The stills carry no graphics, no subtitles, no burned-in UI; the graphics team builds the thumbnail on top.

Platform specs, verified July 2026

Master export for all vertical: 1080 × 1920 , 9:16, MP4 (H.264), 30 fps minimum. Shoot 4K for crop flexibility. Never crop 16:9 into vertical; build native.

PLATFORM	FORMAT	PLATFORM MAX	PROVIDENT CAP	NOTES
TikTok	1080×1920 · 9:16 · 23–60fps	3 min in-app / 10 min upload	45 s	72MB Android · ~287MB iOS via app · burned-in subs
Instagram Reels	1080×1920 · 9:16 · 30fps+	3 min in-app / 15 min upload	45 s	Top 14% + bottom 20% clear · cover 9:16, grid crops 3:4
Instagram Stories	1080×1920 · 9:16	60 s cards, auto-split	45 s	Top + bottom 250 px clear (profile icon, reply box)
Instagram Feed	1080×1350 · 4:5 preferred	60 min	45 s	Most screen real estate of the feed formats
YouTube Shorts	1080×1920 · 9:16	3 min	45 s	Non-9:16 gets letterboxed; always native vertical · burned-in subs
YouTube Standard	1920×1080 min · 4K 3840×2160 preferred · 16:9	256GB / 12 hrs (verified)	< 20 min	SRT per language, not burned in · 24/25/30fps
Facebook	Reels 9:16 · Feed 4:5 or 1:1 · Stories 9:16	Reels 90 s	45 s	Reels = primary video surface · feed is sound-off by default
LinkedIn	9:16, 1:1 or 16:9 · 1080p	10 min organic	45 s	~80% scroll sound-off; burned-in subs non-negotiable · value-first hook
X (Twitter)	720×1280 / 1280×720	140 s · 512MB	45 s	Portrait preferred for feed reach

Production rules by format

CAMPAIGN VIDEOS

One master, many variants

Max 45 s. Deliver as a variant matrix of language, currency and hook (EN/AR/RU × AED/USD/EUR × 2–3 hooks): one master timeline; swap hook, VO and currency supers only. Shot inside the office by default. Cut on every line: one sentence, one shot.

LONG-FORM PODCAST

Under 20 minutes

16:9 master for YouTube with SRT subtitles per language. Cut 40–45 s vertical clips from every episode for Reels / TikTok / Shorts; clips get burned-in subs.

FAST CUTS / TREND EDITS

Clean source footage only

Every source shot must be stabilized and high frame rate: 60 fps minimum, 120 fps if speed-ramping. Fast editing only works when the raw footage is clean. Brand frames and closing logos keep their own timing even inside a fast cut.

INFORMATIVE / EDUCATIONAL

Office locations, line-by-line

Shot across multiple office locations (meeting rooms, lounge, balcony, desks) to vary the frame without leaving the building. Same 45 s cap, same line-by-line cut rhythm. Every number on screen is a super in the company type.

STYLIZED AI STAGING

One clean shot per room

One slow, continuous moving shot per room (gimbal push-in or lateral glide). Never cut between angles of the same room; inconsistent angles break AI generation. Lock exposure and white balance; no whip pans, no handheld shake.

Campaign masters: the three formats

Every campaign delivers all three. The DLD QR code sits top-right on each, inside the safe guides, from the first frame to the last.

Vertical · 1080 × 1920

Meta Reels & Stories, TikTok, Shorts. Clear zones: 250 px top, 340 px bottom, 120 px right. QR 250 × 250 px, 120 px from right, 260 px from top. Subtitles above the bottom clear zone; 45 s cap.

Square · 1080 × 1080

Meta feed placements. 100 px margins on every edge. QR 250 × 250 px, 100 px from top and right. Logo 193 × 40 px, bottom-left. Burned-in subtitles.

Landscape · 1920 × 1080

Google Ads and YouTube. 100 px margins on every edge. QR 250 × 250 px, 100 px from top and right. Logo 193 × 40 px, bottom-left; subtitles lower-center. 4K master (3840 × 2160) preferred.

The DLD QR code

Which code goes on? Every project has its own DLD permit QR; use the one for the project in the video. General Provident brand videos carry the Provident QR.

A wrong QR code, or no QR code, on a real-estate marketing video can result in a fine. The permit QR is a legal requirement, not a design choice. Treat it like the logo: locked position, locked size, on every property video.

RULE	SPECIFICATION
Position	Top-right on every format: below the top clear zone on vertical (260 px from top, 120 px from the right edge); inside the 100 px margins on square and landscape
Size	250 × 250 px on 1080-wide masters; scale proportionally on 4K exports
Treatment	On its white plate with a clear quiet zone. Never animated, never semi-transparent, never behind graphics or subtitles
Duration	First frame to last frame; the QR stays up until the video ends
Verification	Scan-test the export on a phone before delivery; confirm it opens the correct project permit
Exceptions	Fun / entertainment content and office-culture videos with no property marketing carry no QR
